CONIFERS, ROOTED CUTTINGS AND TRANSPLANTS

The following list of rooted cuttings will be for fall to spring shipment except varieties with an asterisk (*) are for Spring delivery, April-June. Most transplants are grown in full sun. The sandy loam soil in which they are grown assures good root systems.

Azaleas

It is best to give young Azaleas protection from wind and sun the first winter to prevent the bark from cracking. This can be done by building frames 1 foot high around the beds and shade with lath or other material. Also it is well to hold up on fertilizers after July and not water much after Sept. 1. This acts to harden off the wood, making them much hardier against severe cold weather.
